Titles

Analysis of forced-convection boiling flow instabilities in a single-channel upflow system 145
Annuli with a rotating inner cylinder, Factors affecting the stability of viscous axial flow in 187
Application of generalized Pythagoras theorem to calculation of configuration factors between surfaces of channels of revolution 157
Appropriate boundary conditions for the solution of the equations of unsteady one-dimensional gas flow by the Lax–Wendroff method 53
Approximate equations for the properties of dry steam from a generalization of Callendar's equation 27
Axial flow in annuli with a rotating inner cylinder, Factors affecting the stability of viscous 187
Bases for predicting gas-particle flows with particular reference to turbomachinery 67
Blade rows, A finite volume method for two-dimensional transonic potential flow through turbomachinery 229
Blade rows, Finite volume method for three-dimensional transonic potential flow through turbomachinery 85
Boiling flow instabilities in a single-channel upflow system, Analysis of forced-convection 145
Boiling on tubes, Peripheral variation of heat transfer under pool 141
Callendar's equation, Approximate equations for the properties of dry steam from a generalization of 27
Casing separations and tip leakage jets on turbine efficiency, Effect of 239
Channels of revolution, Application of generalized Pythagoras theorem to calculation of configuration factors between surfaces of 157
Compressible flow: application to shock-boundary layer interaction, Efficient implicit algorithm for the equations of 2-D viscous 17
Compressor, Measurements in the vaneless diffuser of a radial flow 103
Configuration factors between surfaces of channels of revolution, Application of generalized Pythagoras theorem to calculation of 157
Convection heat transfer to liquid sodium, Turbulent mixed 107
Convection near a vertical wall, Theoretical considerations of transition to turbulence in natural 131
Deposition of nucleated fog droplets on steam turbine stator blades by blade heating, Suppression of the 207
Diffusers, Effects of swirl on flow separation and performance of wide angle 199
Droplet deposition on low pressure steam turbine guide blades, Effect of thermophoresis on fog 161
Effect of casing separations and tip leakage jets on turbine efficiency 239
Effect of thermophoresis on fog droplet deposition on low pressure steam turbine guide blades 161
Effects of sound on flow separation from blunt flat plates 113
Effects of swirl on flow separation and performance of wide angle diffusers 199
Effects of temperature dependence of viscosity and viscous dissipation on laminar flow heat transfer in circular tubes 33
Efficient implicit algorithm for the equations of 2-D viscous compressible flow: application to shock-boundary layer interaction 17
Entrance region flow between parallel plates, Exact solution for 177
Exact solution for entrance region flow between parallel plates 177
Factors affecting the stability of viscous axial flow in annuli with a rotating inner cylinder 187
Finite volume method for three-dimensional transonic potential flow through turbomachinery blade rows 85
Finite volume method for two-dimensional transonic potential flow through turbomachinery blade rows, A 229
Flow between parallel plates, Exact solution for entrance region 177
Flow separation from blunt flat plates, Effects of sound on 113
Fog droplets on steam turbine stator blades by blade heating, Suppression of the deposition of nucleated 207
Forced-convection boiling flow instabilities in a single-channel upflow system, Analysis of 145
Gas flow by the Lax–Wendroff method, Appropriate boundary conditions for the solution of the equations of unsteady one-dimensional 53
Gas-particle flows with particular reference to turbomachinery, Bases for predicting 67
Generalized Pythagoras theorem to calculation of configuration factors between surfaces of channels of revolution, Application of 157
Hartmann–Sprenger tube, Heating characteristics of a new type of 97
Head coefficients for radial impellers, A new method for calculating the Busemann 169
Heating characteristics of a new type of Hartmann–Sprenger tube 97

Heat transfer in circular tubes, Effects of temperature dependence of viscosity and viscous dissipation on laminar flow 33
Heat transfer to liquid sodium, Turbulent mixed convection 107
Heat transfer under pool boiling on tubes, Peripheral variation of 141
Instabilities in a single-channel upflow system, Analysis of forced-convection boiling flow 145
Jets, On the mixing of axi-symmetric ducted 43
Laminar flow heat transfer in circular tubes, Effects of temperature dependence of viscosity and viscous dissipation on 33
Measurements in the vaneless diffuser of a radial flow compressor 103
Mixing of axi-symmetric ducted jets, On the 43
Mixtures, Velocity of sound in two-phase 79
New method for calculating the Busemann head coefficients for radial impellers, A 169
On the mixing of axi-symmetric ducted jets 43
Parallel plates, Exact solution for entrance region flow between 177
Peripheral variation of heat transfer under pool boiling on tubes 141
Radial flow compressor, Measurements in the vaneless diffuser of a 103
Radial impellers, A new method for calculating the Busemann head coefficients for 169
Review of turbomachinery tip gap effects. Part 2: Rotating machinery, A 2
Separation and performance of wide angle diffusers, Effects of swirl on flow 199
Shock-boundary layer interaction, Efficient implicit algorithm for the equations of 2-D viscous compressible flow: application to 17
Sound in two-phase mixtures, Velocity of 79
Sound on flow separation from blunt flat plates, Effects of 113
Stability of viscous axial flow in annuli with a rotating inner cylinder, Factors affecting the 187
Steam flows, A tabular method of estimating nucleating 217
Steam from a generalization of Callendar's equation, Approximate equations for the properties of dry 27
Steam turbine guide blades, Effect of thermophoresis on fog droplet deposition on low pressure 161
Steam turbine stator blades by blade heating, Suppression of the deposition of nucleated fog droplets on 207
Suppression of the deposition of nucleated fog droplets on steam turbine stator blades by blade heating 207
Swirl on flow separation and performance of wide angle diffusers, Effects of 199
Tabular method of estimating nucleating steam flows, A 217
Temperature dependence of viscosity and viscous dissipation on laminar flow heat transfer in circular tubes, Effects of 33
Theoretical considerations of transition to turbulence in natural convection near a vertical wall 131
Thermophoresis on fog droplet deposition on low pressure steam turbine guide blades, Effect of 161
Tip gap effects. Part 2: Rotating machinery, A review of turbomachinery 2
Tip leakage jets on turbine efficiency, Effect of casing separations and 239
Transition to turbulence in natural convection near a vertical wall, Theoretical considerations of 131
Transonic potential flow through turbomachinery blade rows, A finite volume method for two-dimensional 229
Transonic potential flow through turbomachinery blade rows, Finite volume method for three-dimensional 85
Turbine efficiency, Effect of casing separations and tip leakage jets on 239
Turbomachinery blade rows, A finite volume method for two-dimensional transonic potential flow through 229
Turbomachinery blade rows, Finite volume method for three-dimensional transonic potential flow through 85
Turbomachinery tip gap effects. Part 2: Rotating machinery, A review of 2
Turbulence in natural convection near a vertical wall, Theoretical considerations of transition to 131
Turbulent mixed convection heat transfer to liquid sodium 107
Turbomachinery, Bases for predicting gas-particle flows with particular reference to 67
Unsteady one-dimensional gas flow by the Lax–Wendroff method, Appropriate boundary conditions for the solution of the equations of 53
Velocity of sound in two-phase mixtures 79
Viscosity and viscous dissipation on laminar flow heat transfer in circular tubes, Effects of temperature dependence of 33
